Re: damage to Mantua Roads

After review of damage and clean-up of roadways & surrounding impacted areas of the year 2000 Mantua Reservoir improvement project, performed by Skeen Construction for Brigham City Corporation, we feel the following items should be resolved:

1-Road base or gravel from the intersection of Indian Trail Road & Field Lane south to the end of the road.

2-All sharp rocks removed from the shoulders of the road or from the center of the road, that protrude out of the road from Joel Stoddard's gate (approximately 300  feet North of intersection south to the end of the road.)

3-Rocks removed from the irrigation ditch that rolled in from the construction project.

4-Tree branches removed that were broken off for easier passage of your equipment.

5-Reimbursement for water used from our culinary water system, taken from the fire hydrant and the Town Hall.
